INITIAL VISIT PACKET UNIFORM DATA SET (UDS) VERSION 4.0

Form D1a: Clinical Syndrome

ADRC:	PTID:	F	orm date:/	/	Visit #:	initials:		
Language: 1 Englis 2 Spanis	h □ 1 In-person	Key (remote reas	2=Too physic	cally impaired and or nursing home				
INSTRUCTIONS: This form is to be completed by the clinician. For additional clarification and examples, see the UDS Coding Guidebook for Form D1a. Check only one box per question.								
_	 Diagnosis method—responses in this form are based on diagnosis by a: Single clinician Formal consensus panel Other (e.g., Two or more clinicians or other informal group) 							
Sectio	n 1 – Level of impairment –	Unimpaired co	gnition/beho	avior, SCD, MC	I/MBI, or der	mentia		
1 A 2	 2. Does the participant have: Unimpaired cognition (e.g., cognitive performance and functional status (i.e., CDR) judged to be unimpaired)? AND Unimpaired behavior (i.e., the participant does not exhibit behavior sufficient to diagnose MBI – see MBI section starting at Q7) or dementia due to FTLD or LBD and/or FTLD behavior and language domains=0? No (SKIP TO QUESTION 3) 1 Yes (CONTINUE TO QUESTION 2a) Note: For those with longstanding cognitive impairment that does not represent a decline from their usual functioning, consider checking Question 5b for a diagnosis of "Cognitively Impaired, Not MCI/dementia". 							
Subjec	tive Cognitive Decline							
2a.	Does the participant report 1) signific 2) no neuropsychological evidence of			-	0 No (END FO	ORM HERE)		
2b.	As a clinician, are you confident that is clinically meaningful?	:he subjective cogi	nitive decline	0 No (END FO				
Demer	itia criteria							
Participa	ement #1: ant has cognitive or behavioral (neuro ns that meet <u>all of the following criter</u>		Requirement Participant m following do	nust have impair	ment in <u>one* c</u>	or more of the		
 Interfere with ability to function as before at work or at usual activities Represent a decline from previous levels of functioning Are not explained by delirium or major psychiatric disorder Include cognitive impairment detected and diagnosed through a combination of: 1) history-taking; 2) objective assessment (bedside or neuropsychological testing) Impaired ability to acquire and remember new information Impaired visuospatial abilities Impaired language functions Changes in personality, behavior, or comportment * In the event of single-domain impairment (e.g., language in PPA, behavior in bvFTD, visuospatial in posterior cortical atrophy, etc.), the participant must not fulfill criteria for MCI. 								
_	oes the participant meet criteria for denderson to the local of the lo	mentia?	TO QUESTION 6	5a)				

NATIONAL ALZHEIMER'S COORDINATING CENTER naccmail@uw.edu naccdata.org

Section	n 1 – Level of impairmen	t			continued			
MCI cor	e clinical criteria							
Check all	criteria that apply in Q4.							
If all three	criteria are checked, choose 1=MC	l for Q4b. If less than 3	criteria are met, cho	ose 0=No for Q4b.				
4b.	Does the participant meet all thre (amnestic or non-amnestic)?	ee of the above crite	ria for MCI	O No (CONTINUE TO QUESTION) 1 Yes (SKIP TO QUESTION)				
Cogniti	vely impaired, not MCI/den	nentia						
	ose of the "Cognitively impaired, n nt or decline who do not meet for		egory is to capture t	those individuals with evider	nce of cognitive			
Check all	Check all applicable criteria for cognitively impaired, not MCI/dementia in Q5, using any relevant data. Any conditions contributing to impairment (e.g., substance abuse or medications) should be identified in Section 3. (Note: If recent onset (not longstanding impairment), indicate the cognitive symptom(s) in Form B9 – Clinician Judgment of Symptoms.)							
5. I Evidence of functional impairment (e.g., CDR SB>0 and/or FAS>0), but available cognitive testing is judged to be normal Cognitive testing is abnormal but no clinical concern or functional decline (e.g., CDR SB=0 and FAS=0) 1 Longstanding cognitive difficulties, not representing a decline from their usual function (e.g., early developmental differences remote TBI, other medical condition with clear effects on cognition) 1 Other (SPECIFY):								
	ne criteria in Q5 are met, or if only ia is met in Q4, select 0=No for Q5		eria from Q4 are met	, choose 1=Yes for Q5b. Note	e, if <u>only</u> the third			
5b.	Does the participant meet any credementia?	iteria for cognitively	impaired, not MCI/	0 No (SKIP TO QUESTION 1 Yes (SKIP TO QUESTION				
Affecte	d Domains – Dementia and	MCI						
Choose domains that are impaired at the current visit. <u>Select one or more</u> as Impaired ; all others will default to unimpaired in the NACC database.								
Note on behavior changes : For patients with <i>dementia</i> who have behavior changes, record the presence of behavioral changes here (not in the following MBI section) by marking Q6f as Impaired and skipping the MBI section (SKIP TO Q8a). For behavioral changes in the context of an MCI (or as an isolated) symptom, consider a diagnosis of MBI in the next section.								
					Impaired			
6a.	Memory				□ ₁			
6b.	Language				□ ₁			
6c.	Attention				□ ₁			
6d.	Executive				□1			
6e.	Visuospatial				□ ₁			
6f.	Behavioral (for participants with a	lementia only; see MB	l for MCI participants)	□1			
6g.	Apraxia				□ 1			

Sectio	n 1 – Level of impairment		continued		
Mild Be	havioral Impairment (MBI) core clinical criteria				
 Participant, co-participant, or clinician identifies a change in the participant's affect, motivation, thought content, behavior, or personality that is clearly different from their usual affect, motivation, thought content, behavior, or personality Symptoms have been present at least intermittently for the last six months or longer Late onset (i.e., age > ~50, unless early onset neurodegenerative syndrome is suspected) Not explained by delirium, other psychiatric disorder by DSM criteria (including recent onset, longstanding or recurrence of longstanding disorder). Symptoms interfere with at least one of these: work, interpersonal relationships, social activities Largely preserved independence in other functional abilities (no change from prior manner/level of functioning, or uses minimal aids or assistance) 					
		SKIP TO QUESTION 8a) (CONTINUE TO QUESTION	N 7a)		
(N	BI affected domains — <u>Select one or more</u> affected domains ote: If "Yes" is indicated in any domain below, the participant should have a corresponding symptom Symptoms, either from among the specific symptoms denoted there, or in "other")	checked on Form B9 — Clini	cian Judgment		
			No Yes		
7a.	Motivation (e.g., apathy symptoms on Form B9)		□0 □1		
7b.	Affective regulation (e.g., anxiety, irritability, depression, and/or euphoria symptoms on Form B	9)	□0 □1		
7c.	Impulse control (e.g., obsessions/compulsions, personality change, and/or substance abuse sym	otoms on Form B9)	□0 □1		
7d.	7d. Social appropriateness (e.g., disinhibition, personality change, and/or loss of empathy symptoms on Form B9)				
7e.	7e. Thought content/perception (e.g., delusions and/or hallucinations on Form B9)				
Sectio	n 2 – Clinical syndrome				
MCI or M cognitive Diagnose	to be some of Section 2 is to assign a predominant clinical syndrome to participants with BI, using all available clinical, exam, and neuropsychiatric data. This should be done use neuropsychological testing, ideally without reference to biomarker data (which is ses section in Form D1b). This is not always possible and thus Q9 allows centers to recore influenced the clinical diagnosis.	sing clinical information incorporated into the Et	and iological
